

### Overview:

There are many resources which are available online as hyperlinks which you can post into a course. In order to respect copyright, materials which you find should be linked to instead of copied; when you are making a hyperlink to a webpage, you're referring students to where that material can be found, and not infringing on copyright.

### Locations to Find Free Content:

- Textbook/Publisher websites
- Professional society and trades society websites
- Federal departments, bureaus, and administrations such as the National Institutes of Health, Federal Aviation Administration, Small Business Administration, National Science Foundation, Corporation for Public Broadcasting, National Endowment of the Arts, and OSHA (Most materials developed for the Federal government are in the public domain since they've been paid for with Federal tax dollars. Materials which are not in the public domain but are publicly accessible through web pages can be linked to from your course.)
- [Creative Commons](#) materials
- Open courseware materials released by other academic institutions, and materials released by other educational institutions
- Learning object repositories such as [MERLOT.org](#).
- Public broadcasting sites such as [PBS.org](#), [NPR.org](#), [MPR.org](#), [WPR.org](#), and the [Annenberg Foundation's Learner.org](#)
- Sites which host a variety of podcasts and videos on different topics such as [YouTube](#), [TeacherTube](#), and [Open Culture](#)
- Use a search engine such as [Google](#) to find content online

### Notes:

- If you want to copy the information into your course rather than like to it, you will need to get permission from the owner of the content
